## Connective Cities – Our mission

There are many innovative and highly effective local solutions for sustainable urban development in the world, which are not sufficiently known. Our mission since 2013 is to promote the **exchange of municipal expertise** around the globe, disseminate proven practices for sustainable urban development, and support **peer-to-peer learning** between Germans and international urban practitioners – including the **joint development of project ideas**.

## Our goals are to:

- offer urban practitioners worldwide an opportunity to share their experiences in the field of sustainable local urban development as part of a structured learning process;
- foster change processes in cities and support sustainable urban development driven by project ideas crafted in these learning processes;
- build local government capacity for cooperation and policy development through tailored learning processes involving other urban practitioners facing similar challenges in Germany and abroad;
- be a facilitator, mediator and moderator of these learning processes.

## Our approach involves:

Our target group consists of municipal practitioners and professionals from local governments, academia, business, politics, civil society and municipal companies.

## Our cross-cutting topics and thematic areas

Good urban governance

Integrated urban development

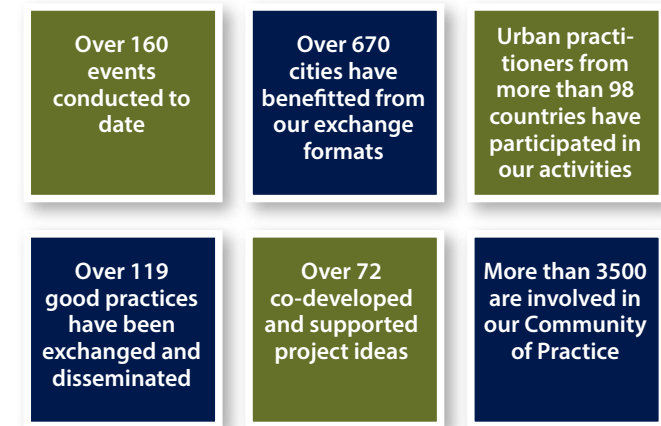

Municipal services

Local economic development

## Our key-figures and success stories

(Figures as of October 2021)

Does the Connective Cities concept appeal to you? If so, you are welcome to:

- participate in our activities;
- take part in our study tours and expert missions;
- join our Community of Practice and share your professional experience;
- exchange best practices with us and other peer groups;
- co-host events and activities with Connective Cities;
- join our regional and global networks;
- sign up to our newsletter to stay informed about upcoming activities and exchanges.
